Elaine Fuchs is the Rebecca C. Lancefield Professor in Mammalian Cell Biology and Development at The Rockefeller University. She is also an Investigator at Howard Hughes Medical Institute. Internationally known for her research in skin biology and associated human genetic disorders, which include skin cancers and life-threatening genetic syndromes such as blistering skin disorders.

Fuchs received her Ph.D. in Biochemistry from Princeton University, and after her postdoctoral research at the MIT, she joined the faculty at the University of Chicago. She stayed there until 2002 when she relocated to The Rockefeller University. Fuchs' awards and honors include the Presidential Young Investigator Award, the National Medal of Science and the L'Oréal-UNESCO Award. She is a member of the National Academy of Sciences, and she holds two honorary doctorates. June 2010 President of the International Society for Stem Cell Research.
